A MOMENT OF DISTRACTION. A LIFETIME OF REGRET.

C.A.R.E. automatically monitors the car after it is parked,
looking for both movement and a living being.
If anything is detected – you get an immediate alert.

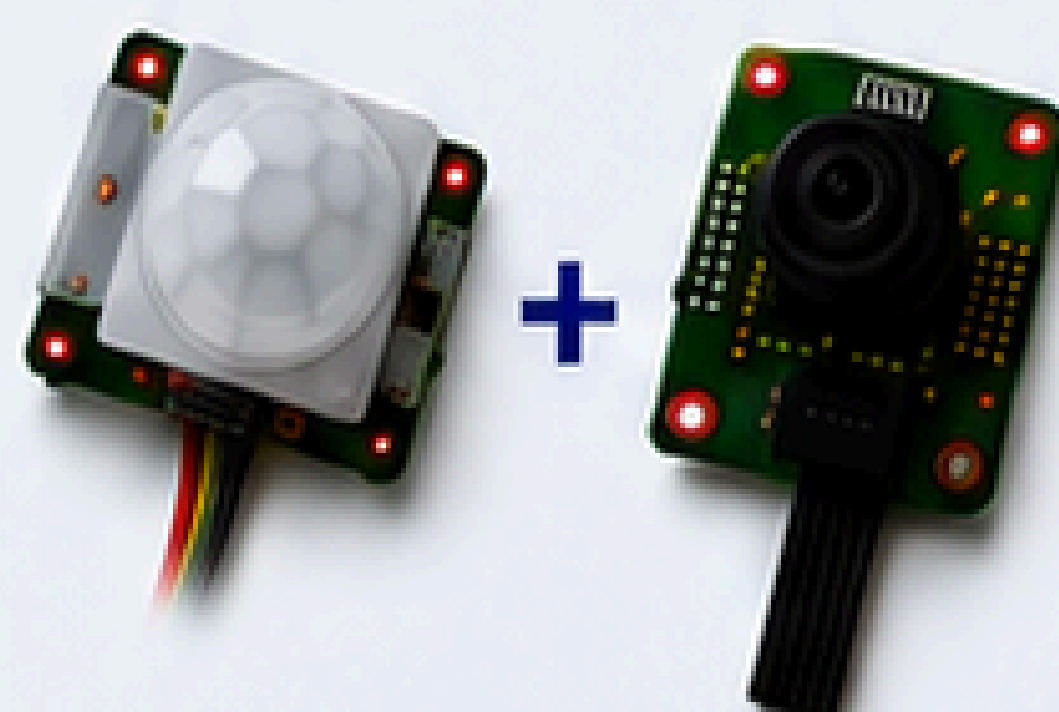

1 ENGINE OFF

Vehicle is turned off.
System switches to
battery and starts
automatic scan.

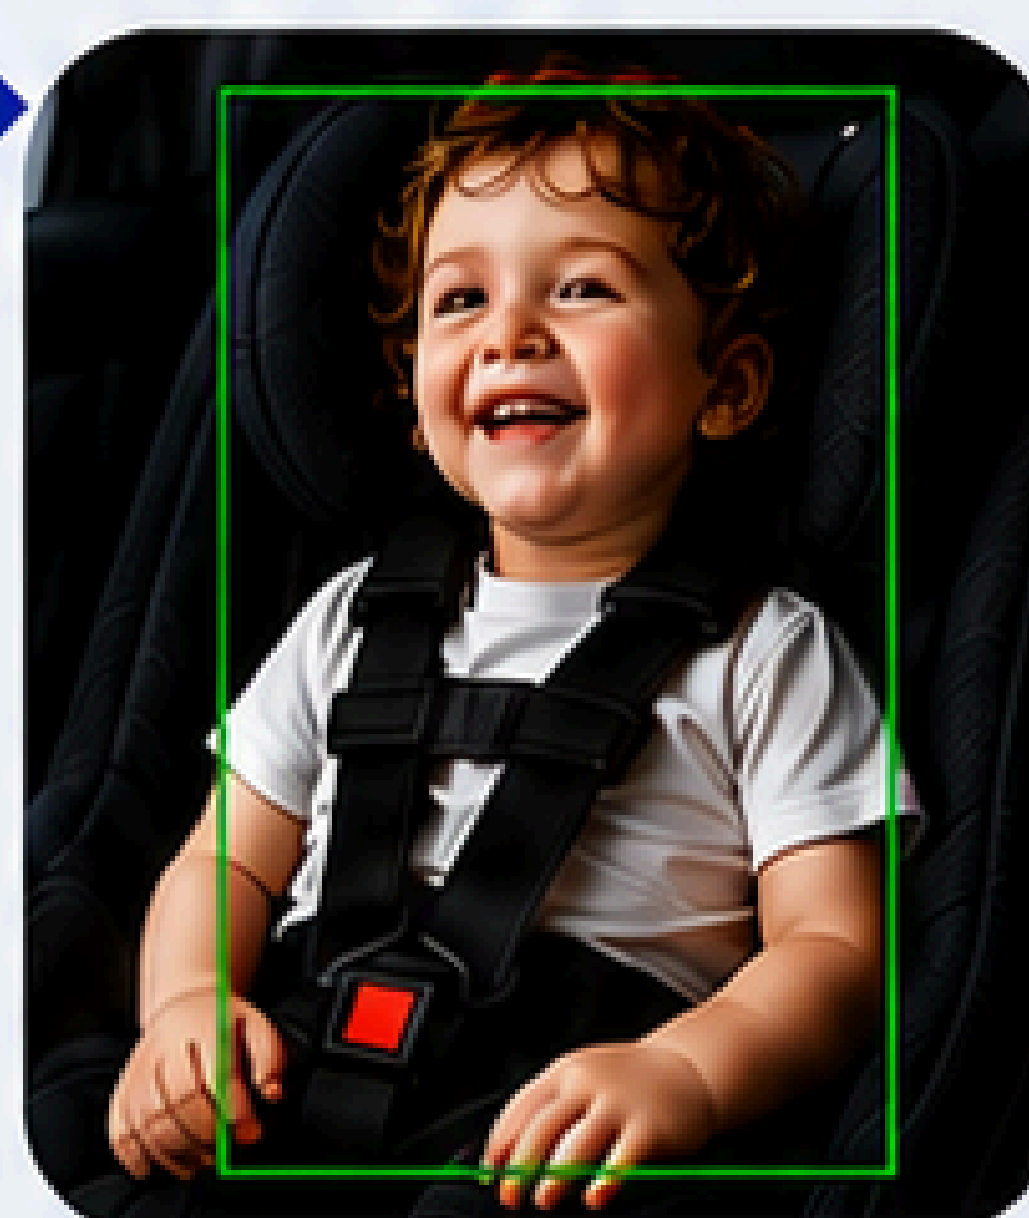

2 SCAN

We use TWO detection sources:
PIR Motion Sensor
Motion information
Camera + Image Analysis
Body / face detection
Either source can trigger
the next step.

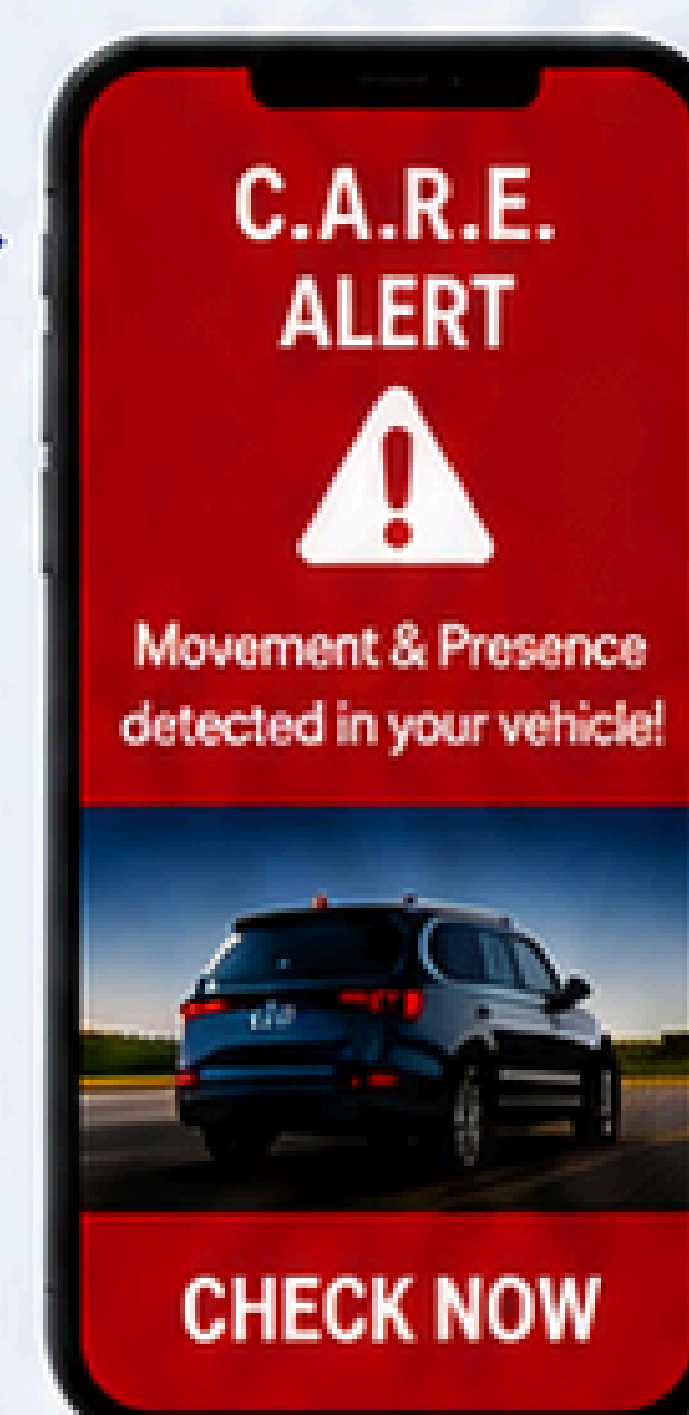

3 DETECT & VERIFY

Image is captured and
processed on the
Raspberry Pi to verify
a living being.

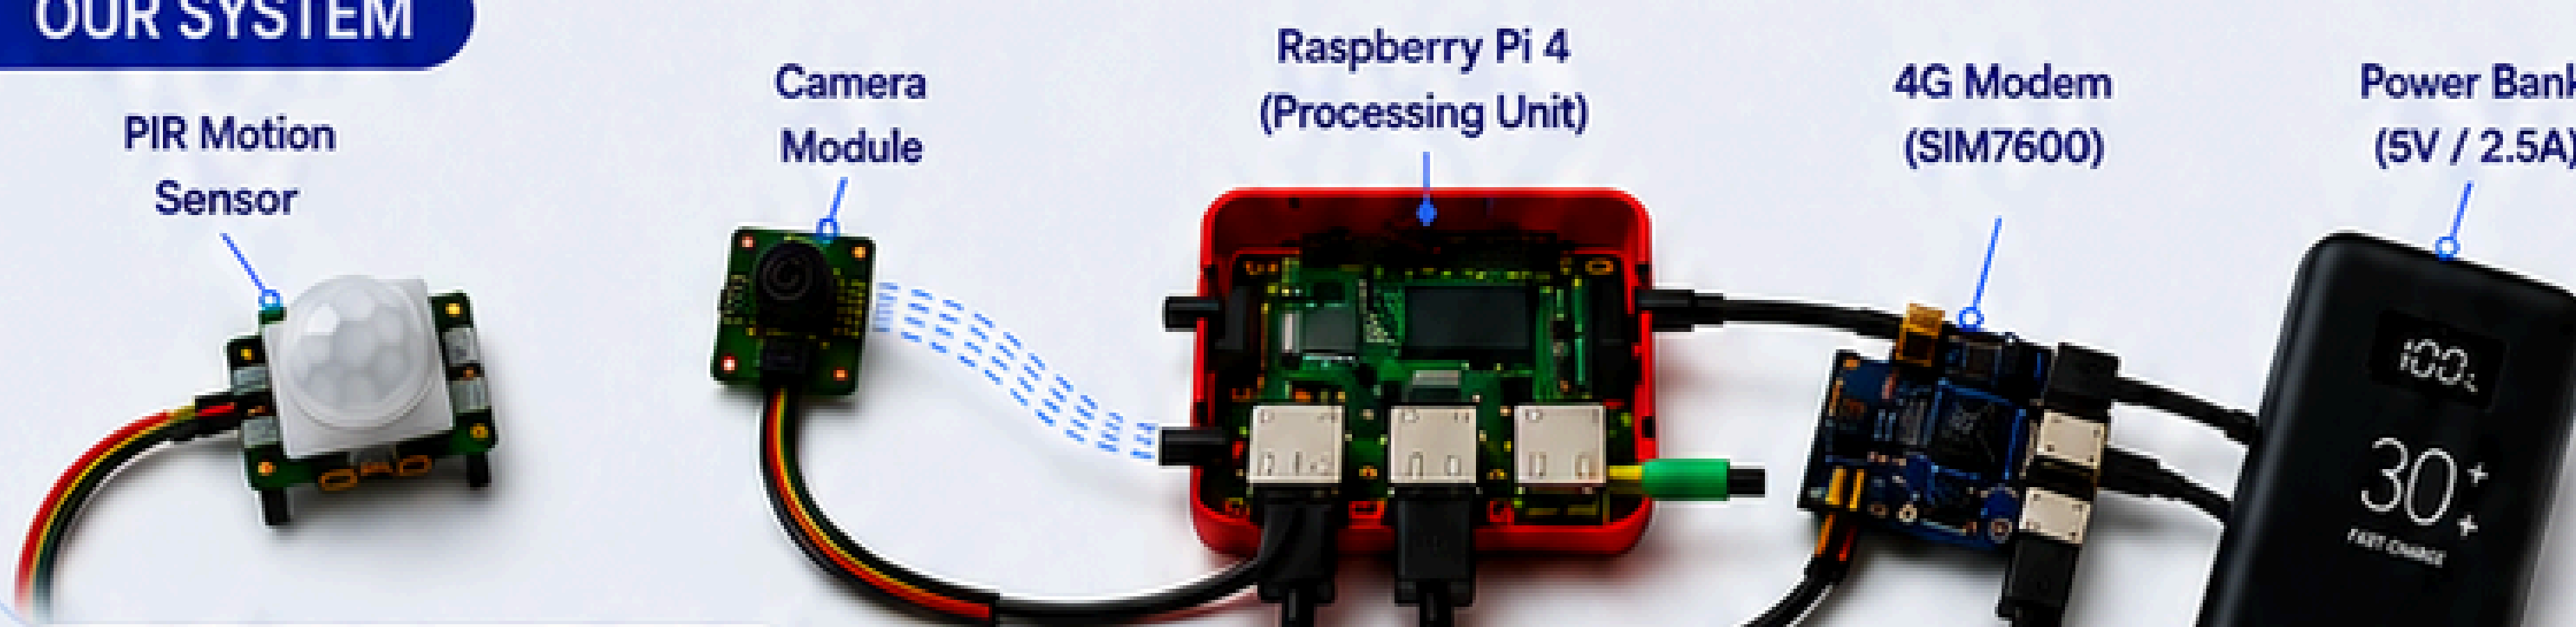

4 ALERT

Instant alert is sent to
your phone and
buzzer is activated.
